

Precision Oncology

Science has demonstrated that each person's cancer is triggered by a unique set of genetic mutations and potentially contributing lifestyle factors.

Precision oncology allows us to test for the specific genetic variations that are driving your cancer and identify the best targeted treatment for you. We will provide you with the most up to date evidence-based options demonstrated to improve life expectancy over standard treatment.

A recent report showed that on average Precision Oncology provides:

- **Tumour shrinkage rates of 30.6% (instead of 4.9% with standard care)**
- **Almost double the progression-free survival**
- **Increased overall survival***

*peer-reviewed references for all statements available upon request.

PLEASE NOTE: CTOAM conducts independent analyses of your test results and provides you with unbiased treatment options. We do not receive commissions, research funding, or other financial incentives or inducements from any of the testing and treatment facilities we recommend.

Recommended by Top Oncologists:
CTOAM's innovative use of state-of-the-art diagnostics and targeted cancer treatment and monitoring is recommended by top oncologists, as well as many general practitioners.

"The knowledge base, expertise, and attention to detail that CTOAM extended to me underscores their professional services." - M. Ranger, patient

"Their research scientists are up to date on the latest advances in cancer research so that the plan they outline for each patient maximizes their chances for a successful outcome" - S. Fasoli, patient

INFORMATION FOR PATIENTS

"Precision medicine is not the future of cancer care- it is the present." - Don Dizon, MD, FACP, American Society of Clinical Oncology

What We Do

- Access and coordinate personalized genetic testing using gold standard diagnostics
- Provide scientific evaluation of your test results based on the most current evidence-based research
- Provide you and your oncologist with a report outlining the targeted treatment options most relevant to your cancer so you can move forward with confidence
- All treatment options recommended by CTOAM are guaranteed to have demonstrated clinical outcomes superior to standard cancer treatment

Our 5-Step Process

1) Initial Personalized Research

Medical records review

We will review your medical records to gain context and history of your cancer and overall health.

Getting to know you

Each person's cancer is unique to them and can be impacted by their lifestyle: work and home environments, habits, and nutrition. We work with you to address any areas of your lifestyle that science has demonstrated can potentially hinder or help your recovery.

2) Advanced Diagnostics

Genetic testing

- **Oncogenomics:** These tests determine mutations in up to 20,000 genes
- **Liquid Biopsy & ctDNA/RNA:** These blood tests provide vital information about any targetable variations, which allows your doctor to track the efficacy of any treatments in real time
- **Custom Molecular Analysis:** Identification and characterization of standard and unique molecular markers including expression testing and epigenetic-based diagnostics

Imaging

PET-CT & PET-MRI Scan: Provides your doctor with a detailed image of the location and aggressiveness of your cancer for more precise surgical application and monitoring of treatment efficacy.

3) Treatment Support

Targeted treatments:

We will quickly connect you and your doctor with the most current FDA approved drugs that are showing results superior to standard care*. We will help to coordinate any necessary tests and treatments and find the most inexpensive way for you to access them.

Innovative surgical options:

Our worldwide network of recognized cancer specialists will connect you and your doctor to the most effective surgical options available.

4) Treatment Monitoring

Using advanced diagnostics, such as PET-CT scans and ctDNA/RNA technologies, we are able to track the efficacy of any treatment in real time and adjust the course of treatment if necessary.

5) Clinical Trial Coordination

Clinical trials represent the leading-edge of medical science. CTOAM researchers will work with you to coordinate access to the most beneficial clinical trial.

Our Guarantee:

All treatment options recommended by CTOAM are guaranteed to have demonstrated clinical outcomes superior to standard cancer treatment.
